Contemporary illuminating technics...

Our company, PSL Elektronik, which is “the first Turkish company that applies Fibre Optic lighting systems in Turkey as a manufacturer” was established in Antalya in 1991. Our company, which concentrated on “Professional Audio and Light” systems at the outset, pursued studies on decorative Fibre Optic lighting applications in 1997 and accomplished applications which are highly successful and each of which is a first and pacesetter in its field.

The achieved successful projects have derived our company to concentrate on the fields of decorative architectural lighting and our company, gradually pulling away from the field of “audio and light” systems, completely steered towards the field of lighting by creating the “FIBERLI” brand in the 2000s.

The pioneer works, projects, conducted during this period, and the technological developments in the LED sector put forth the first signs that a “LED Revolution in Lighting” would occur. Our company, which foresaw this development and progress, gave the decision to completely take part in the “LED Lighting” field as a manufacturer in the 2000s and began to make all of its investments in this direction. Within this framework, we began to domestically manufacture our first LED lighting products and supply to our customers in 2002.

We, from the outset, designated our manufacture philosophy on the basis of domestic manufacture, high quality, customer-oriented, respect and affectio towards humans, environments and nature. Our company, which has never made concessions to these principles, has achieved to become one of the frontrunner and leading organisations in the field of our region in a short span of time.

In 2013, for the purpose of providing a service with much higher capacity, pace and quality, we completed our new factory investment, established on a 6.000 m2 area within the Antalya Organized Industrial Zone and commenced manufacturing. Our company, which has accomplished more than 800 large scaled projects up until now, at the present;

- has close to 300 employee,
- sales and service units located in numerous countries,
- carries out projects and applications customly designed for individuals or businesses,
- possesses a 15-person Research – Development staff,
- Design Unit, expert in the field of lighting,
- Together with the branches and countless representatives in Istanbul, Antalya, Ankara, Izmir, Moscow, Dubai and Ashgabat, we are working to provide you perfect service and products.

We would like to take this opportunity and once again thank you, our esteemed customers, who have guided us to the present day and never refrained their support.

LED (OEM)

With the utilisation of blue light in leds, the RGB (Red Green Blue) lighting has become a possibility and gained a wide range of applications in many sectors. These lights, swiftly, superseded other light sources particularly within the areas of lighting, signalisation and architectural lighting. The most significant reason for the low energy consumption of leds is the small amount of loss. Additionally, these diodes, which ensure quite a long lifetime, can smoothly be utilised almost in every condition due the non-existence of filament contrary to other bulbs. The current lighting values for white light has surpassed the fluorescent lights with a rather high value of 160 Lumen/Watt. Some prototypes have reached to the rate of 180 Lumen/Watt.

LED Options

T TopLED

TopLEDs can be mounted on single-sided CEM1 PCB due to their low current-carrying capacity and low cost. The whole soldering process is conducted within automatic machines with the use of lead-free solder and untouched by human hands.

PT Power TopLED

For the ease of use in the long term, Power TopLEDs are mounted on double-sided PCBs. All the soldering operations are made in automatic machines by using lead-free solder.

BT Big TopLED M

Big TopLEDs are placed on the double-sided PCB with a thickness of 70 microns. Thus, ensuring the ease of use at full lengths. The rear surface of PCB is used for the purpose of carrying current.

BT Big TopLED RGB

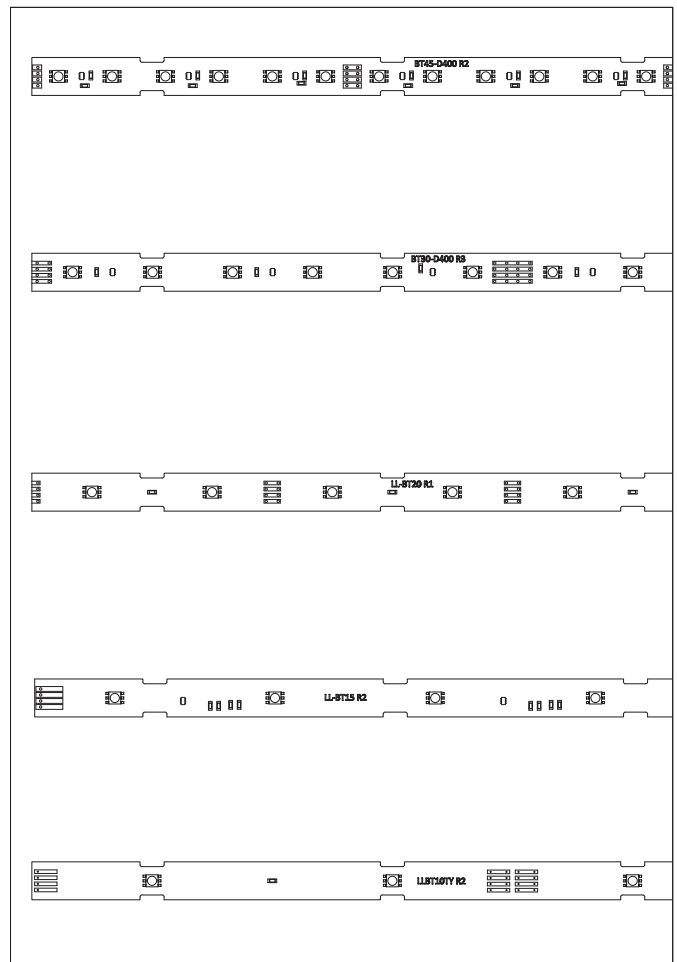

Big TopLEDs are placed on the double-sided PCB with a thickness of 70 microns. Thus, ensuring the ease of use at full lengths. The rear surface of PCB is used for the purpose of carrying current.

P PowerLED

Aluminium PCB is utilised for a better cooling of the PowerLEDs. With this product group, the supply is rendered in every 6 LEDs.

TopLED T

20mA

TopLED Light Values

(CW)	Cool White	4.700-9.500K
(NW)	Natural White	3.700-4.700K

LEDLine

Luminaires provide the ideal lighting solutions for in- and outdoors. These products can be used at desired length without the disclosure of the joints by attaching end-to-end. Luminaires can be produced as RGB or mono color, as per order. They can be accommodated to outdoor use through production in IP65 standards with polymer coating. Our luminaires, for which the world's most efficient LEDs are utilised, are surpassingly economical due to low energy consumption and long lifetime. Moreover, they provide particularly architects and lighting designers with the opportunity to attain their creative ideas with a wide range of color options and changeable color feature.

Linear Illumination Products

LLS LEDLine S

LEDLine Slim, designed to be used in luminaires or applications such as behind glass, light box and PVC stretch ceiling.

LLK LEDLine K

LEDLine K, designed to be used in PVC stretch and plaster ceiling, furnitures, concealed and indirect lighting applications.

LLP LEDLine P

LEDLine P, provides powerful lighting for in- and outdoors in comparison with other linear luminaires.

LLFS8 LEDLine FS8

LEDLine FS8, designed to be used in luminaires or applications such as behind glass, light box and PVC stretch ceiling.

100 LEDLine ERL100

LEDLine ERL100, the luminaire recessedly mounted on plaster ceiling. These products provide a continuous lighting without the disclosure of the joints by attaching end-to-end. A product preferred by designers with its aesthetic structure

75 LEDLine ERL75

LEDLine ERL75, the luminaire recessedly mounted on plaster ceiling. These products provide a continuous lighting without the disclosure of the joints by attaching end-to-end. A product preferred by designers with its aesthetic structure

50 LEDLine ERL50

LEDLine ERL50, the luminaire recessedly mounted on plaster ceiling. These products provide a continuous lighting without the disclosure of the joints by attaching end-to-end. A product preferred by designers with its aesthetic structure

35 LEDLine ERL35

LEDLine ERL35, the luminaire recessedly mounted on plaster ceiling. These products provide a continuous lighting without the disclosure of the joints by attaching end-to-end. A product preferred by designers with its aesthetic structure

25 LEDLine ERL25

LEDLine ERL25, the luminaire recessedly mounted on plaster ceiling. These products provide a continuous lighting without the disclosure of the joints by attaching end-to-end. A product preferred by designers with its aesthetic structure

LLG LEDLine G

LEDLine G, the luminaire recessedly mounted on plaster ceiling. These products provide a continuous lighting without the disclosure of the joints by attaching end-to-end. A product preferred by designers with its aesthetic structure

LLA LEDLine A

LEDLine A, provides linear and continuous lighting with mounting options on ceiling surface or by suspending from ceiling.

LLA100 LEDLine A100

LEDLine A100, provides linear and continuous lighting with mounting options on ceiling surface or by suspending from ceiling.

Linear Illumination Products

LMRA LEDLine MRA

LEDLine MRA, provides the ideal lighting solutions for supermarkets, corridors and shopping malls. These products can be used at desired length without the disclosure of the joints by attaching end-to-end.

LLW1 LEDLine W1

LEDLine W1, provides a linear and continuous appearance on facades. Employs easy implementation on also aluminium, glass, marble, etc. facade cladding.

LLW2 LEDLine W2

LEDLine W2, provides a linear and continuous appearance on facades. Employs easy implementation on also aluminium, glass, marble, etc. facade cladding.

LLB33 LEDLine B33

LEDLine B33, provides a linear and continuous appearance on facades. Employs easy implementation on also aluminium, glass, marble, etc. facade cladding.

LLE LEDLine E

LEDLine E, is used as étanche luminaire in high humidity environments such as garages, coal cellars and bunkers. In addition to its long lifetime, also provides high energy conservation.

LLU LEDLine U

LEDLine U, designed to be used in linear lighting and small scale wall lighting.

LLI LEDLine I

LEDLine I, provides a linear and continuous appearance on facades. Employs easy implementation on also aluminium, glass, marble, etc. facade cladding.

Linear Illumination Products

LLKS LEDLine KS

LEDLine KS, designed to be used in linear lighting and small scale wall lighting.

LLH LEDLine H

LEDLine H, provides a linear and continuous appearance on facades. Employs easy implementation on also aluminium, glass, marble, etc. facade cladding.

LLCRN LEDLine CRN

LEDLine CRN, the decorative lighting luminaire applied on indoor ceiling corners. Generates an aesthetic appearance in locations applied.

LLAT LEDLine AT

LEDLine AT, designed to be used at outdoors and underwater. Provides continuous linear lighting with its exclusive design. Easily mounted by means of mounting clips.

LLUT LEDLine UT

LEDLine UT, designed to be used at outdoors and underwater. Provides continuous linear lighting with its exclusive design. Easily mounted by means of mounting clips.

LTB LEDLine TB

LEDLine TB, luminaire designed for the purpose of converting fluorescent lamps into LEDs. This luminaire can directly be mounted in the fluorescent lamp casing due to its dimensioning in T8 fluorescent lamp standards.

LLMS LEDLine MS

LEDLine MS, used in the illumination of kitchen, bedroom and living room furnitures as wells as for shelving units and shop windows. Easily mounted on various furniture materials.

LLS-P-C-J-M

- Anodized aluminium housing
- As standard, produced in 40, 80, 120, 160 and 200 cm dimensions.
- PCB types can also be produced in custom dimensions according to cutting sizes.
- In IP20 standard and non inclusive of cover and polymer options.
- As standard, PVC side covered. Produced without top cover in IP20 protection class.
- Designed to operate with 24V DC.

*All of the measurements for LEDLine product groups are in mm.

PCB & LED SPECIFICATIONS

LLS-P-C-J-M

LEDLine options, used within the profile, have been selected according to the cooling capacity of the profile. The highest cooling rate for this profile is 14W/m. (P.S. LEDLine LED Options)

LIGHT COLOUR OPTIONS

LLS-P-C-J-M

C	CW: Cold White - 4.700K-9.500K	C	R: Red - 625nm

- LLW2 PT90R: 24V DC - 36W/m - 4.050Lm/m

APPLICATION AREAS

LEDLine W2, provides a linear and continuous appearance on facades. Employs easy implementation on also aluminium, glass, marble, etc. facade cladding.

ELECTROMECHANICAL SPECIFICATIONS

LLW2-P-C-J-I-M

- Anodized aluminium housing
- As standard, produced in 40, 80, 120, 160 and 200 cm dimensions.
- PCB types can also be produced in custom dimensions according to cutting sizes.
- Can be produced in maximum 4-meter parts.
- Polycarbonate top covered.
- Designed to operate with 24V DC.

BODY SPECIFICATIONS

Utilised for implementations up to 35Watt, where the Driver is located within the luminaire.

*All of the measurements for LEDLine product groups are in mm.

PCB & LED SPECIFICATIONS

LLW2-P-C-J-I-M

LEDLine options, used within the profile, have been selected according to the cooling capacity of the profile. The highest cooling rate for this profile is 36W/m. (P.S. LEDLine LED Options)

LEDLine Tube

LTB

LED Tube

APPLICATION AREAS

LEDLine TB, luminaire designed for the purpose of converting fluorescent lamps into LEDs. This luminaire can directly be mounted in the fluorescent lamp casing due to its dimensioning in T8 fluorescent lamp standards.

ELECTROMECHANICAL SPECIFICATIONS

LTB-D-V-C

- Anodized aluminium housing
- As standard, produced in 60, 120 and 150 cm dimensions.

*All of the measurements for LEDLine product groups are in mm.

**The sockets can directly be mounted following the alteration of internal wiring of fluorescent lamp casing. The alterations, which can be applied to the wiring, have been specified according to product groups. Power inputs are rendered from the side of the metal sockets. Other sockets are isolated and plastic.

DIMENSIONS

LTB-D-V-C

D	LTB60: A=602,5mm
	LTB120: A=1.212mm
	LTB150: A=1.512mm

VOLTAGE OPTIONS

LTB-D-V-C

- Luminaires have been designed, as standard, to operate with 220-240V AC, however in case of necessity, the luminaires can be manufactured as DC supplied compatible with the product.
- In addition, luminaires can be produced to be operative at 220V without requiring a separate driver (**Drive On Board**), if necessary.

VOLTAGE OPTIONS	
V	DOB* - 220V AC
	DC - 24V DC

*Drive on Board: By virtue of this method, LEDs are driven with direct 220V AC, through custom ICs, placed on the LED circuit, eliminating the necessity towards the conventional constant current or voltage source. For these circuits, $\cos\phi=1$ at all times. There are no driver losses.

DecoPendant

The DecoPendant series offers decorative lighting solutions with its aesthetic and modern design for venues such as shopping malls, hotels, restaurants and libraries. The luminaires can be mounted by being recessed on or suspended from the ceiling. Additionally, as the luminaires can easily be applied with simple mounting brackets, they are often preferred by interior architects.

Decorative Lighting

BLZ Circular Luminaire

This luminaire, designed in the shape of a collar, is utilised in large space venues such as shopping malls, restaurants and hotels due to its stylish and modern design. A decorative luminaire which can be mounted by hanging on the ceiling and easily applied.

YZKd Ring Luminaire d

Preserves its conventional style with its shape of a ring and outward designed lighting direction. Can easily be applied by hanging on the ceiling with practical mounting brackets. Preferred for indoor venues due to its aesthetical structure.

BLZS Circular Slim Luminaire

The Collar Slim features a thinner design in comparison with the BLZ luminaire for to be utilised in small sized venues such as lobbies, offices, libraries and waiting rooms. By courtesy of this design, the luminaire imparts elegance and delicacy to the environments applied.

YZKi Ring Luminaire i

Creates an extraordinary style with its shape of a ring and inward designed lighting direction. Can easily be applied by hanging on the ceiling with practical mounting brackets. Preferred for indoor venues due to its aesthetical structure.

PZL Puzzle Luminaire

This luminaire, designed in the shape of a puzzle piece, is utilised in large space venues such as shopping malls, restaurants and hotels.

QDR Quadro

This square shaped luminaire is utilised in venues such as shopping malls, restaurants and hotels with its elegant and modern design. The decorative luminaire which can be applied by hanging on the ceiling or mounting on the surface.

DRM Drum Luminaire

This luminaire, designed in the shape of a drum, is utilised in large space venues such as shopping malls, restaurants, hotels and libraries.

QDR² Quadro²

This square shaped luminaire is utilised in venues such as shopping malls, restaurants and hotels with its elegant and modern design. The decorative luminaire which can be applied by hanging on the ceiling or mounting on the surface.

DRMG Drum Recessed Luminaire

This luminaire, designed in the shape of a drum, is utilised in large space venues such as shopping malls, restaurants, hotels and libraries.

LLT15 LEDLine Tube15

This tube shaped luminaire is utilised for indoor venues such as offices, receptions and libraries. The decorative luminaire which can be applied by hanging on the ceiling.

DRMS Drum Surface Luminaire

Drum Surface has been designed in order to be utilised for indoor venues without suspended ceilings. This luminaire, which can easily be mounted on the ceiling surface, renders an aesthetical illumination in venues.

Beehive Beehive

This cylinder shaped luminaire is utilised for indoor venues such as shopping malls. The decorative luminaire mounted by hanging on the ceiling and easily applied.

• CromaDown®

CromaDown series enable a flawless integrity with the interior ceilings. These luminaires render a high energy conservation by virtue of their low power consumption. They are particularly utilized for general lighting of venues such as offices, stores, universities, hospitals and museums. They provide compatible lighting solutions to every project with high-quality and elegant body designs, diverse sizes and light angles.

Downlight Products

CDAW **CromaDown AW**

CromaDown AW has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CDK **CromaDown K**

CromaDown K has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CD66 **CromaDown 66**

CromaDown 66 has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CDP3 **CromaDown P3**

CromaDown Pro3 has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CD69 **CromaDown 69**

CromaDown 69 has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CDP5 **CromaDown P5**

CromaDown Pro5 has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CD72 **CromaDown 72**

CromaDown 72 is a recessed luminaire, which features a square-shaped design and is capable of spotlight-effect light distribution.

CDSH1 **CromaDown SH1**

CromaDown SH1 is a recessed luminaire, designed to enable to point the light in different directions. The rotatable structure within the luminaire housing provides the flexibility in pointing the light to the desired spot. Offers comfortable, dynamic and effective lighting with its square design. Procures functional lighting solutions in venues such as stores, galleries, charcuteries and showrooms.

CDA **CromaDown A**

CromaDown A is a recessed luminaire, which features a square-shaped design and is capable of spotlight-effect light distribution.

CD7AT **CromaDown 7AT**

CromaDown 7AT has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CDS1 **CromaDown S1**

CromaDown S1 is a recessed luminaire, which features a square-shaped design and is capable of spotlight-effect light distribution.

Downlight Products

CD500 **CromaDown 500**

CromaDown 500 has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CDMS **CromaDown MS**

CromaDown MobSpot is a luminaire, designed to be used on furniture materials. It is also used on kitchen, bedroom and living room furnitures as well as for shelving units and shop windows.

CD1 **CromaDown 1**

CromaDown 1 has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

QR111A **CromaDown QR111A**

CromaDown QR111A is a luminaire designed as an alternative to the Halogen AR111 spotlight. It is much more efficient than the conventional AR111 spotlight. Additionally, they minimise the maintenance cost by means of their long lifetime.

CDMR16 **CromaDown MR16**

CromaDown MR16 is a recessed luminaire, which offers fixed or rotatable body options.

CDFA **CromaDown FA**

CromaDown FA is a luminaire designed for high-bay venues. It is resistant to possible impacts and explosion risks. The polycarbonate cover prevents dust, oil and pest accumulation. By means of its custom reflector, this luminaire prevents discomfort glare in the eyes by concentrating the light underneath.

Downlight Products

CD5 CromarDown 5

CromarDown 5 has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

CDRB150 CromarDown CDRLB150

RollBeehive150 is a surface-mounted luminaire, with a cylinder-shaped design. This cylinder-shaped luminaire is used in venues such as galleries, stores, showrooms, restaurants, halls and foyers.

CDRB175 CromarDown CDRLB175

RollBeehive175 is a surface-mounted luminaire, with a cylinder-shaped design. This cylinder-shaped luminaire is used in venues such as galleries, stores, showrooms, restaurants, halls and foyers.

CDRB300 CromarDown CDRLB300

RollBeehive300 is a surface-mounted luminaire, with a cylinder-shaped design. This cylinder-shaped luminaire is used in venues such as galleries, stores, showrooms, restaurants, halls and foyers.

CDLP CromarDown LP

CromarDown LP is a luminaire offering fixed and rotatable head options. It can directly be mounted on the ceiling, fixed or rotatable stand. Thanks to its rotatable head, it is possible to divert the light to the desired spot. This luminaire is particularly used for jewellery and watch store windows, museum display cases and art exhibitions.

CD13 CromarDown 13

CromarDown 13 has been designed to be used for jewellery and watch store windows, museum display cases and art exhibitions. This luminaire, with its local lighting, elevates the fascination towards the exhibited objects, by accentuating their aesthetic details. It generates a luminous passage on the exhibited object by directing lights in different colours to different areas with its rotating head.

PNLC CromarDown PNL CLIP IN

PNL Clip In is a recessed luminaire, produced as an alternative for 4x18 watt fluorescent luminaire. This luminaire replaces the fluorescent lamps due to its energy conservation, long lifetime and high colour rendering. A homogeneous lighting is achieved as the diodes, used for this luminaire, are closely positioned to each other. Furthermore, these luminaires can easily be mounted on suspended ceiling applications, through its practical type of mounting. Particularly used in venues such as offices, hospitals and general stores.

PNLL CromarDown PNL LAY ON

PNL Lay On is a recessed luminaire, produced as an alternative for 4x18 watt fluorescent luminaire. This luminaire replaces the fluorescent lamps due to its energy conservation, long lifetime and high colour rendering. A homogeneous lighting is achieved as the diodes, used for this luminaire, are closely positioned to each other. Furthermore, these luminaires can easily be mounted on suspended ceiling applications, through its practical type of mounting. Particularly used in venues such as offices, hospitals and general stores.

PNLS CromarDown PNL SURFACE

PNL Surface is a recessed luminaire, produced as an alternative for 4x18 watt fluorescent luminaire. This luminaire replaces the fluorescent lamps due to its energy conservation, long lifetime and high colour rendering. A homogeneous lighting is achieved as the diodes, used for this luminaire, are closely positioned to each other. Furthermore, these luminaires can easily be mounted on suspended ceiling applications, through its practical type of mounting. Particularly used in venues such as offices, hospitals and general stores.

Recessed downlight

APPLICATION AREAS

CromaDown AW has been designed for utilisation in spacious venues and is a recessed luminaire with spotlight-effect light distribution. This luminaire, enabling a flawless integrity with the ceiling, renders comfortable and effective lighting for corridors, halls, receptions, offices, galleries and conference rooms.

ELECTROMECHANICAL SPECIFICATIONS

CDAW-D-V-C-G

- Aluminium injection body
- Electrostatic powder coated
- Polycarbonate luminaire glass

DIMENSIONS

CDAW-D-V-C-G

VOLTAGE OPTIONS

CDAW-D-V-C-G

- Luminaires are designed to be operative at 220V AC, as standard.
- In addition, luminaires can be produced to be operative at 220V without requiring a separate driver (**Drive On Board**), if necessary.

VOLTAGE OPTIONS	
V	AC - 220V AC
	DOB* - 220V AC

*Drive on Board: By virtue of this method, LEDs are driven with direct 220V AC, through custom ICs, placed on the LED circuit, eliminating the necessity towards the conventional constant current or voltage source. For these circuits, $\cos\theta=1$ at all times. There are no driver losses.

LIGHT COLOUR OPTIONS

CDAW-D-V-C-G

C	CW: Cold White - 4.700K-9.500K
	NW: Natural White - 3.700K-4.700K
	WW: Warm White - 2.700K-3.700K

BODY COLOUR OPTIONS

CDAW-D-V-C-G

The luminaires are produced in black, white and grey, as standard. The RAL code must be specified for custom colours.

Protection Class: IP40

Lifetime: 50.000 hours

The lumen outputs, given in the charts, are the maximum values for the LEDs used in the luminaires, specified by taking the cover and diffuser losses into consideration.

The specified power ratings are the total amount of energy consumed by the luminaire, including all of the losses.

WallWasher®

The WallWasher series offer ideal lighting solutions for in- and outdoor venues. These luminaires are utilised for the purpose of illuminating structures spread on high and capacious areas. They particularly render homogeneous and linear lighting on the surfaces of historical and modern structures such as stadiums, monuments, bridges. The luminaires furnish solutions of high quality and efficiency without being affected by adverse weather conditions due to their powerful technical structures. Luminaires can both be produced as mono colour or RGB, as per order. Also, they provide architects and lighting designers the opportunity to fictionalise their creative ideas by virtue of a wide range of colour options and capability to change colours.

WallWasher® Products

WL WallWasher L

WallWasher L is a LED projector, designed to be used both for in- and outdoor venues. This luminaire offers an aesthetical lighting by accentuating the architectural details through facade and surface lighting.

WS WallWasher S

WallWasher S is a LED projector, designed to be used both for in- and outdoor venues. This luminaire conspicuously illuminates larger and higher structures. The luminaire offers precise lighting of the targeted height and area by means of angle adjustable mounting stands.

WH WallWasher H

WallWasher H is a LED projector, designed to be used both for in- and outdoor venues. This luminaire illuminates large and high structures with much more powerful lighting. It can reach towering heights and areas by means of its angle adjustable mounting stands.

VOLTAGE OPTIONS

WL-D-V-C-O-J-K-S-U-E

- The mono colour luminaires have been designed, as standard, to operate with 220-240V AC, however in case of necessity, the luminaires can be manufactured as DC supplied compatible with the product.
- The colour-changing luminaires are manufactured as DC supplied (product-compatible voltage) or PWM controlled, as standard.

VOLTAGE OPTIONS

V	DC - 12V, 15V, 24V, 12-24V (Determined during product selection)
	AC - 220-240V AC

LIGHT COLOUR OPTIONS

WL-D-V-C-O-J-K-S-U-E

	CW: Cold White - 4.700K-9.500K		RGBA: RGBA

MOUNTING

Each part of the mounting stand is manufactured from stainless chrome.

- 1- According to the length of the luminaire, 1 or more stand may be assembled. Single stand is supplied for luminaires up to 30cm and two stands are supplied for longer luminaires, as standard.

- 2- Luminaire stands have been designed to be mounted on the bottom or the side of the body of luminaire, according to the purpose of use.

- 3- Stand length can optionally be extended with custom designed aluminium stand profile, according to the purpose of use. As standard, the lengths of the stands are prepared in 5cm, 10cm and 20cm-parts.

- 4- The mounting angle of luminaire can be adjusted between 0°- 95°. The stand, according to the purpose of use, can be mounted on the pole or surface.

MOUNTING

The stand, according to the purpose of use, can be mounted on the pole or surface.

1-Surface mounting:

Standard surface mounting

Type stand has been designed for mounting on solid surfaces such as concrete, wood, etc. The luminaire can be veered between 0° - 95° and fixed with a fixing screw.

2- Mounting on pole:

Optional pole connection apparatus

The stand, which has been designed for the facilitation of mounting on a pole with a diameter of 60mm, enables the mounting of luminaire on the pole vertically and horizontally. Additionally, 24° angle adjustment, with 12° upward and 12° downward, can be performed.

•CromaFloor®

CromaFloor provides ideal lighting solutions for both indoor and outdoor venues. These are LED luminaires which are recessed to the ground or mounted on the ground surface. They are, particularly, preferred for the lighting of parks, gardens and staircases. This luminaire does not harm the human skin with the low spot temperature, thus rendering the ground safe to walk around barefoot.

CromaFloor® Product

CF500 CromaFloor 500

CromaFloor 500 has been designed as a floor recessed miniature luminaire. This luminaire does not harm the human skin with the low spot temperature, thus safely utilised on floors where walked on barefoot. Various light combinations can be achieved through its wide range of colour options and colour changing feature.

CF5Y CromaFloor 5Y

CromaFloor 5Y is the luminaire mounted on the floor surface. These are used for the lighting of structures such as monuments and statues.

CF1 CromaFloor 1

CromaFloor 1 is a floor recessed luminaire. This luminaire does not harm the human skin with the low spot temperature, thus safely utilised on floors where walked on barefoot. Various light combinations can be achieved through its wide range of colour options and colour changing feature.

CFL CromaFloor L

CromaFloor L is the floor-recessed luminaire, utilised for in- and outdoor venues. This luminaire, which is highly impact-resistant, provides linear lighting solutions.

CF1-01 CromaFloor 1-01

CromaFloor 1-01 is a floor recessed luminaire. This luminaire does not harm the human skin with the low spot temperature, thus safely utilised on floors where walked on barefoot. Various light combinations can be achieved through its wide range of colour options and colour changing feature.

CFT CromaFloor T

CromaFloor T is the floor-recessed luminaire, utilised for in- and outdoor venues. This luminaire, which is highly impact-resistant, provides linear lighting solutions.

CF3 CromaFloor 3

CromaFloor 3 is a floor recessed luminaire. This luminaire does not harm the human skin with the low spot temperature, thus safely utilised on floors where walked on barefoot. Various light combinations can be achieved through its wide range of colour options and colour changing feature.

CFU33 CromaFloor U33

CromaFloor U33 is the floor-recessed luminaire, utilised for in- and outdoor venues. This luminaire, which offers continuous linear lighting solutions, is frequently preferred by architects and designers.

CF5 CromaFloor 5

CromaFloor 5 is a floor recessed luminaire. This luminaire does not harm the human skin with the low spot temperature, thus safely utilised on floors where walked on barefoot. Various light combinations can be achieved through its wide range of colour options and colour changing feature.

CFU23 CromaFloor U23

CromaFloor U23 is the floor-recessed luminaire, utilised for in- and outdoor venues. This luminaire, which offers continuous linear lighting solutions, is frequently preferred by architects and designers.

CF1Y CromaFloor 1Y

CromaFloor 1Y is the floor recessed luminaire utilised in areas such as sidewalks, pedestrian pathways and cycle paths. These luminaires can conveniently be used in every area due to their endurance towards heavy tonnage vehicles by virtue of their powerful structure.

CF500 RGB: 1 LED-8W

APPLICATION AREAS

CromaFloor 500 has been designed as a floor recessed miniature luminaire. This luminaire does not harm the human skin with the low spot temperature, thus safely utilised on floors where walked on barefoot. Various light combinations can be achieved through its wide range of colour options and colour changing feature.

ELECTROMECHANICAL SPECIFICATIONS

CF500-C-O-U

- Stainless steel body and stainless steel product frame
- Polycarbonate luminaire glass
- Operates within a constant output power, at each voltage values between 10 volts and 30 volts through stabilising the output current by means of the Stepdown current regulator and renders maximum efficiency.

BODY SPECIFICATIONS

*All of the measurements for CromaFloor product groups are in mm.

LIGHT COLOUR OPTIONS

- Luminaires are designed to be operative at 12~24V DC, as standard.
- The colour-changing luminaires are produced as 7,5V DC, as standard.

Protection Class: IP67

Lifetime: 50.000 hours

CromaFloor L

CFL

Recessed luminaire

APPLICATION AREAS

CromaFloor L is the floor-recessed luminaire, utilised for in- and outdoor venues. This luminaire, which is highly impact-resistant, provides linear lighting solutions.

ELECTROMECHANICAL SPECIFICATIONS

CFL-V-C-O-K-B

- Anodized aluminium housing
- Stainless steel product frame
- Polycarbonate luminaire glass
- Aluminium injection side cover
- LEDLine and PowerLED options.

BODY SPECIFICATIONS

*All of the measurements for CromaFloor product groups are in mm.

LEDLine with CFL

CFL40 A = 490mm
CFL80 A = 890mm
CFL120 A = 1290mm
CFL160 A = 1690mm

PowerLED with CFL

CFL109 A = 380mm
CFL218 A = 670mm
CFL327 A = 960mm
CFL436 A = 1250mm

VOLTAGE OPTIONS

CFL-V-C-O-K-B

- The mono colour luminaires have been designed, as standard, to operate with 220V AC, however in case of necessity, the luminaires can be manufactured as 24V DC supplied compatible with the product.
- The colour-changing luminaires are manufactured as DC supplied (product-compatible voltage) or PWM controlled, as standard.

VOLTAGE OPTIONS

V DC - 12V-24V (Determined during product selection)
 AC - 220V AC

• AquaCroma®

AquaCroma series has been designed to be utilized under water or in regions close to water. Generates more luminous flux with lesser energy. Provides solutions of high quality and efficiency by virtue of powerful technical structures.

AquaCroma® Products

AC500F AquaCroma 500F

AquaCroma 500F is the ground-recessed pool light, with a long lifetime, designed for ornamental pools and fountains. The body of this luminaire is applied in a manner, to be completely kept underwater. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AC500N AquaCroma 500N

AquaCroma 500N is the nozzle spot, with a long lifetime, designed for the fountains of ornamental pools. The body of this luminaire is applied in a manner, to be completely kept underwater. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AC1F AquaCroma 1F

AquaCroma 1F is the ground-recessed pool light, with a long lifetime, designed for ornamental pools and fountains. The body of this luminaire is applied in a manner, to be completely kept underwater. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AC1N AquaCroma 1N

AquaCroma 1N is the nozzle spot, with a long lifetime, designed for the fountains of ornamental pools. The body of this luminaire is applied in a manner, to be completely kept underwater. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AC1J AquaCroma 1J

AquaCroma 1J is the recessed underwater light, with a long lifetime, designed for hot tubs. This luminaire does not harm the human skin, due to its low spot temperature.

AC3F AquaCroma 3F

AquaCroma 3F is the ground-recessed pool light, with a long lifetime, designed for ornamental pools. The body of this luminaire is applied in a manner to be completely kept underwater.

AC3N AquaCroma 3N

AquaCroma 3N is the pedestal pool light designed for large ornamental pools. The body of this luminaire is applied in a manner to be completely or partially kept underwater.

AC5F AquaCroma 5F

AquaCroma 5F is the pedestal pool light designed for large ornamental pools. The body of this luminaire is applied in a manner to be completely or partially kept underwater. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AC5N AquaCroma 5N

AquaCroma 5N is the pedestal pool light designed for large ornamental pools. The body of this luminaire is applied in a manner to be completely or partially kept underwater. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AC5G AquaCroma 5G

AquaCroma 5G is the wall-recessed pool light, with long lifetime and in PAR 56 dimensions, designed for swimming pools. This luminaire does not harm the human skin, due to its low spot temperature. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AC5K AquaCroma 5K

AquaCroma 5K is the wall-recessed pool light, with long lifetime and in PAR 56 dimensions, designed for swimming pools. This luminaire does not harm the human skin, due to its low spot temperature. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AC5Y AquaCroma 5Y

AquaCroma 5Y is the pool light, with a long lifetime and which can be mounted on the wall-surface, designed for swimming pools. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

AquaCroma 500F is the ground-recessed pool light, with a long lifetime, designed for ornamental pools and fountains. The body of this luminaire is applied in a manner, to be completely kept underwater. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

ELECTROMECHANICAL SPECIFICATIONS

AC500F-C-O

- Stainless steel body and stainless steel product frame
- Polycarbonate luminaire glass
- Operates within a constant output power, at each voltage values between 10 volts and 30 volts through stabilising the output current by means of the Stepdown current regulator and renders maximum efficiency.

BODY SPECIFICATIONS

*All of the measurements for AquaCroma product groups are in mm.

The body of this luminaire is applied in a manner to be kept completely underwater. AC500F is designed to be only cooled with water and therefore must definitely be used as immersed to the water. Additional connection boxes for cable connections are separately procured.

VOLTAGE SPECIFICATIONS

Mono colour luminaires are designed to operate at 12~24V DC, as standard.

LIGHT COLOUR OPTIONS

AC500F-C-O

APPLICATION AREAS

AquaCroma 1F is the ground-recessed pool light, with a long lifetime, designed for ornamental pools and fountains. The body of this luminaire is applied in a manner, to be completely kept underwater. Various lighting combinations can be formed with the wide range of colour options and colour changing feature, offered with this product.

ELECTROMECHANICAL SPECIFICATIONS

AC1F-C-O-U

- Stainless steel product frame
- Aluminium injection body
- Tempered luminaire glass
- Operates within a constant output power, at each voltage values between 10 volts and 30 volts through stabilising the output current by means of the Stepdown current regulator and renders maximum efficiency.
- Operates in alternative or direct current.
- Utilised in the changing of 50W halogen lamps without application of any circuit changes.

BODY SPECIFICATIONS

*All of the measurements for AquaCroma product groups are in mm.

VOLTAGE OPTIONS

- Mono colour luminaires, as standard, are designed to operate at every voltage between 12V~24V AC/DC with consuming the same amount power. On account of said feature, the luminaire has a high tolerance against voltage drops.
- Colour changing luminaires are produced as 7,5V DC PWM controlled, as standard.

LIGHT COLOUR OPTIONS

*All of the measurements for AquaCroma product groups are in mm.

VOLTAGE OPTIONS

- Mono colour luminaires, as standard, are designed to operate at every voltage between 12V~24V AC/DC with consuming the same amount power. On account of said feature, the luminaire has a high tolerance against voltage drops.
- Colour changing luminaires are produced as 7,5V DC PWM controlled, as standard.

LIGHT COLOUR OPTIONS

*The luminaire power may vary according to the ordered colour options.

Protection Class: IP68

Lifetime: 50.000 hours

APPLICATION AREAS

AquaCroma 1J is the recessed underwater light, with a long lifetime, designed for hot tubs. This luminaire does not harm the human skin, due to its low spot temperature.

ELECTROMECHANICAL SPECIFICATIONS

AC1J-C-O

- Aluminium injection body
- Tempered luminaire glass
- Operates within a constant output power, at each voltage values between 10 volts and 30 volts through stabilising the output current by means of the Stepdown current regulator and renders maximum efficiency.
- Operates in alternative or direct current.
- Utilised in the changing of 50W halogen lamps without application of any circuit changes.

BODY SPECIFICATIONS

*All of the measurements for AquaCroma product groups are in mm.

AC5Y-C-O-U

U P: Polycarbonate

U C: Stainless steel coating

MOUNTING

Mounted in areas where PAR56 is present.

- The luminaires are supplied with 0.4 metre rubber underwater cable and 1 single underwater cable joint.
- The underwater cable joint must be used if underwater cable splicing is to be applied.

CONTROL SYSTEM OPTIONS

All of the luminaire have been designed as PWM-controlled. Other control options are identified at the power station, which the luminaires are connected to.

•Cromagardena®

The Cromagardena series is utilised in the illumination of public spaces such as parks, gardens and squares. These luminaires offer an aesthetical illumination of garden compositions. The luminaires can be produced as mono colour or RGB, as per order. Also, they provide the opportunity to fictionalise various luminous effects for landscape architects by virtue of a wide range of colour options and capability to change colours. They provide solutions of good quality and energy efficient without being affected by adverse weather conditions due to their powerful technical structures.

CromaGardena® Product

CG1 CromaGardena 1

CromaGardena 1 is a garden spotlight with long lifetime utilised for the illumination of plants such as ornamental trees and flowers.

CG3 CromaGardena 3

CromaGardena 3 is a garden spotlight with long lifetime utilised for the illumination of areas such as parks, gardens and squares.

CG5-18 CromaGardena 5-18

CromaGardena 5-18 is utilised in the illumination of areas such as parks, gardens and squares. This 18 LED luminaire generates powerful luminous flux with lesser energy.

CG5-24 CromaGardena 5-24

CromaGardena 5-24 is utilised in the illumination of areas such as parks, gardens and squares. This 24 LED luminaire generates powerful luminous flux with lesser energy.

CGP5 CromaGardena P5

CromaGardena Plant 5 is a plant spotlight with long lifetime, designed for the purpose of enabling the greenhouse plants to grow faster.

CG1 D4: 4 LEDs - 4,5W - 420Lm

Protection Class: IP67

Lifetime: 50.000 hours

APPLICATION AREAS

CromaGardena 1 is a garden spotlight with long lifetime utilised for the illumination of plants such as ornamental trees and flowers.

ELECTROMECHANICAL SPECIFICATIONS

CG1-V-C-O-U-M

- Stainless steel product frame
- Aluminium injection body
- Polycarbonate limunaire glass
- By means of the constant current driver integrated to the luminaire, provide a safe and efficient with being unaffected by possible fluctuations within the mains voltage for LEDs.

*All of the measurements for CromaGardena product groups are in mm.

VOLTAGE OPTIONS

CG1-V-C-O-U-M

- The mono colour luminaires have been designed, as standard, to operate with 220V AC, however in case of necessity, the luminaires can be manufactured as DC supplied compatible with the product.
- In addition, luminaires can be produced to be operative at 220V without requiring a separate driver (**Drive On Board**), if necessary.
- Mono colour DC luminaires are, optionally, produced to consume the same amount of power at every unit of voltage between 12-24V DC.
- The colour-changing luminaires are manufactured as DC supplied (product-compatible voltage) or PWM controlled, as standard.

VOLTAGE OPTIONS	
DC	- 12V, 15V, 24V (Determined during product selection)
V AC	- 220V AC
DOB*	- 220V AC

*Drive on Board: By virtue of this method, LEDs are driven with direct 220V AC, through custom ICs, placed on the LED circuit, eliminating the necessity towards the conventional constant current or voltage source. For these circuits, $\cos\phi=1$ at all times. There are no driver losses.

LIGHT COLOUR OPTIONS

CG1-V-C-O-U-M

P (PowerLED) (3535)	1W / 350mA - 3W / 700mA	
	CW: Cold White - 4.700K-9.500K	R: Red - 625nm

• LEDCell

LEDCell series is Multi – LED curtains and spot luminaires, manufactured in the form and measurements convenient for organizations such as concerts, exhibitions, discos, fairs and venues for light shows. The pixel resolutions of these luminaires can be adjusted depending upon the watching distance. Fascinating light shows and graphic animations can be displayed. There are also types of luminaires within this series which react to sound and transmit live feed. These can both be used as fixed or portable due to their flexible design.

LEDCell Product

CDP **CromaDot Pixel**

It is the DMX or PWM controlled spot luminaire, designed to create animations and light shows without enforcing any limitations on the length of the facades.

CED **LEDCell Pixel**

CED luminaires can be utilised on facades without any length limitations, due to being spot luminaires. These luminaires are preferred in areas such as Shopping Malls and entertainment centres as a result of their contribution in the aesthetical appearance of the venues.

LCP **LEDCell Pixel**

Single and multi-panel compatible, 20mm, interactive, multiLED matrix.

LEDCellPixel

LCP

Applicable interactive and video graphic screen

APPLICATION AREAS

The luminaires are frequently utilised at hotels, concerts, discos, fairgrounds and performing art activities by virtue of their easily adjustable structure. There are also flexible and radiant screen types, which are noise-sensitive and can transmit live feed from computers. These luminaires have been designed in a manner to transmit continuous stream from screens aligned side-by-side.

ELECTROMECHANICAL SPECIFICATIONS

These are visual, graphic and animation products at free resolution (min 8mm/pixel), which are restricted in terms of measurement and form, can be placed on a panel in the form of strips or chains and each LED of which (Full Colour) can be controlled with the IC placed within the related LED.

LED OPTIONS

LEDCell (5050) FB102

(F) Full Color (R)-(G)-(B)

MOUNTING OPTIONS

The luminaires are mounted to the floor with screws. They are mounted with the assistance of adhesives in impenetrable surfaces.

Stand, wall suspension, recessed mounting options are also applicable. Single screen appearance can be provided by placing the screens, which are manufactured in defined measurements, side-by-side. The screens are uniformly manufactured at desired dimensions and continuous display is achieved by combining more than one screen, in the form pursuant to the measurements of the area of application.

LEDCellPixel Panel:

This panel is utilised by being mounted on a FR4 PCB panel, with dimensions of 40x40cm, for indoor applications at resolution ranges of 8mm-30mm/pixel. The mechanical infrastructure, compatible with this structure, is available and video, graphic and animation panels, at desired dimensions, with the combination of panels, can be formed.

LEDCell Panel 24V:

- Used in indoors.
- Operating voltage is 24 V.
- Offers several application and mounting options depending on the project.
- Led spacing is 2.4 cm.
- 18-block matrix PCB can be divided into 18 separate pieces and each of these pieces can separately be used.
- There are 288 LEDs in 18-block matrix PCB and 16 LEDs in every block.
- The dimensions of the 18-block matrix are 286mm X 575mm. The dimensions of a single block, on the other hand, are 95mm X 95mm.

LEDCell Pixel Controlled Products

LEDCellPixel

LEDCell Panel 5V:

- Used in indoors.
- Operating voltage is 5V.
- Offers several application and mounting options depending on the project.
- Led spacing is 2cm.
- Matrix PCB is manufactured in 320mm X 320mm dimensions.

LEDCellPixel Bar:

This bar is utilised through mounting on FR4 PCB strips with a width of 16 mm and length of 40 cm for indoor implementations at a resolution range of 30mm-70mm/pixel. Single side supply up to 5 meters can be applied by joining the strips. This structure can also be utilised with all LLS, LLK and LLU profiles. Through interconnecting these profiles, video, graphic and animation panels at desired dimensions are created. It can be accommodated to outdoor use through polymer coating.

LEDCell 20:

- Designed within the rate of 20 pixel per 1 meter.
- Operating voltage is 5V.
- Led spacing is 5 cm.
- Divisibility option for every led.
- The profile, which can be utilised with this product, is deep housing profiles. LLI, LLW2, LLU profiles can be listed as examples for these profiles.
- Outdoor or indoor options available.
- Manufacturable in custom dimensions according to the project.

LEDCell 30:

- Designed within the rate of 30 pixel per 1 meter.
- Operating voltage is 5V.
- Led spacing is 3,33 cm.
- Divisibility option for every led.
- The profile, which can be utilised with this product, is deep housing profiles. LLI, LLW2, LLU profiles can be listed as examples for these profiles.
- Outdoor or indoor options available.
- Manufacturable in custom dimensions according to the project.

LEDCell Pixel Controlled Products

LEDCell Pixel

LEDCellPixel Tube:

These products can be utilised via mounting on FR4 PCB strips, with a width of 8 mm and length of 40cm for applications at resolution ranges of 30mm-70mm/pixel in order to establish a flexible structure at in- and outdoors. These strips, by being attached to each other, can be utilised with single-sided supply up to 4 meters. Video, graphic and animation panels can be formed, at desired dimensions, by placing this structure into transparent or diffused polycarbonate tubes, with an outer diameter of 10mm, and attaching strips, which can stretch up to 1-meter diameter. The silicon covers, utilised for the tube, accommodates the use of product for outdoor applications.

LEDCellPixel Chain:

It is consisted of pixels, formed with FR4 PCB with a length of 30mm and width of 16mm or 8mm at pixel spacing longer than 70mm. The resolution of these structures determines the length of the cable used between the pixels. The pixels with 16mm width of these structures are utilised with LLS, LLK and LLU profiles and with 8mm width, on the other hand, by being placed in transparent or diffused polycarbonate tubes, with an outer diameter of 10mm. Once again video, graphic and animation panels, at desired dimensions can be established by means of attaching these structures together.

SYSTEM SPECIFICATIONS

The LEDCell system is much more economical, in comparison with rapid, reasonable and equivalent systems. The product, which is created as a result of imposition of central processor within the LED product via the high integration technique, completely eliminates the overpriced, heavy and burdensome electronic congestion of previous generation RGB systems. This system offers an opportunity for design with its simple and elegant measurements. The array units, which are designed to be flexible in terms of the desired resolutions, can subside to resolutions, starting from 1cm pixel spacing, thus increasing the image quality.

The Smart LED, within PLCC casing equipped with high quality RGB LED chips, can ensure the precise processing of all data with the 1.2 MHz processor, available inside the LED, and the transmission of data, unlinked with the LED, to other LEDs. The LED lifetime is secured by driving of LEDs with accurate current intensity via the constant current driver technique. The need for extra components is eliminated by means of the integrated processor and inter-processor LDO. The LED array structure, in conformity with the IP67 Protection Class and also the IP67 outer housing provide double protection against the adversity of weather conditions while working outdoors. The user can easily prepare shows and control the system with the provided software. It can operate on its own, without the need for a computer, by means of uploading the prepared shows to a SD card and loading on the controlling device. This product is a flexible solution for utilisation for animation and show purposes.

LEDCell Pixel Controlled Products

LEDCellPixel

RESOLUTION

Highest resolution 8mm/pixel, lowest resolution 300mm/pixel.

DATA TRANSFER

- SD CARD
- Optional Video / VGA / LAN RJ45 / HDMI / WI-FI

LED

PLCC 5050 R,G,B high brightness LED chip + Integrated

ADDRESSING

- Automatic addressing and mapping function with internal CPU
- LED drive with inner constant current source
- 1.677.216 colour options
- 256 Grey level detection
- 32 step brightness control
- Signal verification automatic
- Inner 1.2 MHz processor speed
- 15 MHz maximum data speed detection and rendition
- Restructuring of data signal with phase reversal lock and possibility to transfer 1000 LEDs at 1 MHz
- Impact and difficult conditions resistant physical structure with its SMD structure
- Does not require extra electronic component due to its completely integrated structure. Easily enlarged and minimized system structure.

ARRAY STRUCTURE

Compatible to operate outdoors within IP44 as standard and IP65 protection class as optional, can operate at -20 +55 C temperature and %90 relative humidity.

CONTROL SYSTEM

PC based, minimum 1Ghz processor, 256 Mb Ram, 1GB hard disk, VGA video card, Ethernet port and smart card printer.

CONTROL DEVICE

Each control device has the capacity to drive 2422 LEDs and enables the driving of 196.000 LED units in cascade connection through Ethernet. The animations and shows can be transmitted to the control device with the aid of a computer or installed SD memory units, if desired.

UTILITIES AND SPECIFICATIONS

Animation design and control is ensured via FIBERLI LED BUILD and FIBERLI LED STUDIO software.

- User-friendly, easily comprehensible menus.
- Built-in array maps and easily constructible mapping interfaces.
- Integrated with the programme, easy to use, direct programming of effects
- Text adding, wrapping menus
- Opportunity for handmade ready grid stage entrance
- Feasibility to include stages and effects in between, to the beginning and end.
- Easy image reception in-between to LED from video signal
- VMV, FLV, Jpeg, M-Peg, PNG, PSD sampling
- Utilised control devices can easily be identified to the system
- Software compatible with quickly preparing and executing shows
- Software compatible with Windows operating system

DMX DECODER OPTIONS

DMX Decoder devices are designed on the basis of standard DMX512A protocol. There are 512 addresses within the DMX512A protocol. Value of 256 grades can be assigned to every address. DMX decoder devices can convert the value of the related address into a signal or voltage (PWM, ANALOG, DIGITAL) compatible with the LED luminaire, by deciphering the aforesaid value from the encrypted 512 address values. The DMX512A input signal necessary for these devices can be provided from DMX control devices or DMX control desk.

Electronic Systems

DIMMER OPTIONS

Mono-colour DIMMER devices are utilised to control the luminous intensity of mono-colour luminaires. Commands can be issued to these devices through the built-in keypad, remote control or analogue control input. There is 1 channel output on these devices and PWM output signal at different rates (%0 - %100) can be produced, depending on the command issued.

PRODUCT CODE	MODEL	DIMENSION	CASE TYPE	OUTPUT TYPE	CLEMENS	BUTTON	1-10 V DC ANALOG INPUT	REMOTE CONTROL	OUTLET CHANNEL

DMX SMART BUFFER

The DMX SMART BUFFER device is utilised to resurge the DMX data link. As standard, 1 DMX data link is transmitted via 2 twisted cable, thus the data link can be transmitted for 100 meters. For further distances, the data link can be extended for another 100 meters through the utilisation of DMX SMART BUFFER. The DMX SMART BUFFER device both boosts the signal and restructures the waveform by replicating the DMX signal.

PRODUCT CODE	MODEL	DIMENSION	CASE TYPE
33600189	R-DMX SMART BUFFER	45x45x90 mm	Compatible with 11 pin ray type clemens
*	M1-DMX SMART BUFFER		Desktop type Barrier clemens
*	L-DMX SMART BUFFER	130x20x12 mm	Line type, compatible with LL holder

PWM SWITCH

PWM SWITCH device is used in order to resurge the PWM RGB (3 channels) power line. PWM SWITCH is utilised when we wish to multiplex the outlets of the MODULATOR or DMX DECODER and correspondingly to run multiple luminaires within the same animation. Moreover, the luminaires of different models and with different operating voltages, can be synchronised and run within the same animation by means of PWM SWITCH.

PRODUCT CODE	MODEL	DIMENSION	CASE TYPE	CHANNEL
33600240	R-PWM SWITCH	45x45x90 mm	Compatible with intra-panel type 11 pin ray type clemens	3
*	M2-PWM SWITCH		Desktop type Barrier clemens	4

MODULATOR SPECIFICATIONS

The modulator devices are utilised in order to create the desired animations with RGB luminaires. These devices can be commanded by means of on-board key pad or remote control. Commands, such as animation type, animation speed, play or stop, can be issued. There are 3 channel outlets on these devices. PWM signals, at different values and speeds from every outlet, are generated depending on the selected animation.

PRODUCT CODE	MODEL	DIMENSION	CASE TYPE	OUTPUT TYPE	CLEMENS	REMOTE CONTROL	OUTLET CHANNEL
33600171	R-PWM-11	43x43x89 mm	In board type	PWM %0 ~ %100 256 level	Compatible with 11 pin ray type clemens		3 RGB

MECHANICS SPECIFICATIONS

The electronic control systems are placed within compatible boxes depending on their manner, place of use and functions. These systems are manufactured with an aluminium body for the purpose of controlling the electromagnetic scattering, cooling of heated devices and compliance with fire regulations.

BOX TYPE

R TYPE:

Aluminium body device which is affixed to 11 pinned socket compatible with mounting to internal panel ray.

M1 TYPE:

Desktop device with barrier terminal power, RJ45 data input-output and aluminium body.

M2 TYPE:

Desktop device with barrier terminal power, data input-output and aluminium body.

Electronic Systems

Electronic control systems

L TYPE:

Designed with a thin long structure with cable inlets and outlets in order to be used inside the luminaire and on line, thus featuring the same mounting options with LEDLine luminaires.

UK TYPE:

Its Fibered Remote controls provides you with the opportunity for wireless control of lighting systems up to 30 Meters of distance. Depending on the remote control type, this type enables you to control the setting of the desired colour and light intensity, powering on and off and various lighting animations with the 2.4 GHz RF modulation by means of the touch-sensitive area and function keys on the handle. It offers the controlling of many receiver control units or the flexibility to classify the remote controls with a single remote control. The 2.4 GHz receiver units are compatible with Fibered Wi-Fi Bridge control and enable control also with Smart Phones via the network established with the matching with the Bridge.

DE TYPE:

Touchscreen, wall type mounting, modulator and dimmer.

41000106 WI-FI BRIDGE (FOR TOUCHSCREEN CONTROLS):

It is the bridge system, which also enables the control of fibered remote control products via Wi-Fi. It also offers the opportunity to control the lighting systems with smart telephones and tablets via the internet by means of IOS-Android applications.

Electronic Systems

POWER SUPPLY OPTIONS

The power supplies, utilised for the products, feature the specifications provided below, depending on the type of product, place of use and power consumption.

Constant-Current Power Supply

PRODUCT CODE	POWER	VOLTAGE	CONSTANT CURRENT	IP

FiberOptic

Fiber optic lighting is the transmission of light, generated by a light generator, to the desired area through the medium of fiber optic cables. The source of light undertakes the task of light generation and the fiber optic cable, the task of light transmitter. The only limit in designing with the fiber optic lighting systems is your imagination. You can apply almost everything that you imagine. The most fundamental characteristics of fiber optic lighting technology, which creates its difference to other lighting technologies, are FREEDOM and FLEXIBILITY. You have the freedom to place the light source, used for the fiber optic lighting systems, at any desired location. This notion of freedom comes with plenty of advantages.

Fiber optic lighting system is comprised of 2 main parts:

- Light source
- Fiber Optic cable harness

(*) *LENS Luminaires can also be used if demanded accordingly to the above.*

The Fiber Optic cables are harnessed after being cut in compliance with the prepared project, architectural design or requirement. These harnesses are placed to the light source (point of origin of light) with terminal sleeves. Thus, the light, generated by the light source, is transmitted through the fiber optic harness to the luminaire or directly bare fiber optic end. A single Fiber optic cable harness is comprised of fiber optic cables, with the same or different diameters or lengths, which are completely determined according to your needs. Fiber optic lighting system delivers a lighting marvel, which we can dare say to be extraordinary and which will stretch the imagination in architectural designs, by virtue of the separation of luminaire and light source via fiber optic cables. The luminaires to be used include a wide range of variety, depending upon the architecture of the venues (such as crystal end, terminal end, lens luminaires).

Intended Use of Lens Luminaire

- Gaining an aesthetic appearance
- Gaining a more intensive light
- In situations where spot lighting is demanded
- In situations where flood lighting is demanded

Additionally, these luminaires also take precedence over the conventional lighting components due to their smaller dimensions and offering the capability to be equipped with optic lenses. The outlet angle of the light can be lowered to 1° from 120° with luminaires selected for proper use, in order to increase the light intensity. Thus, the desired effect can, clearly, be achieved.

FiberOptic Product

LIGHT SOURCES

IK7 **Light Source 7**

Low-powered LED light source

IK77 **Light Source 77**

High-powered LED light source

IK16 **Light Source 16**

Halogen light source

IKL150 **Light Source L150**

General purpose Fiber Optic light source

FIBER OPTIC CABLES

FOK **FiberOptic Cable**

Various fibre optic cable options for fibre optic lighting

FIBER OPTIC LENSES

Lens **FiberOptic Lenses**

These are utilised to cloak, disambiguate the outlet of light, to offer an aesthetical appearance or to direct the light.

IK7

IK77

Protection Class: IP44 / IP65

Lifetime: 50.000 hours

Light Source 7 & 77

IK7 - IK77

LED Light Source

APPLICATION AREA

As the LED light source is produced with Light LEDs for fiber optic application, these products offer low consumption (1W – 5W), low investment costs, quite long bulb lifespan, 0dB noisy (noiseless), low voltage (5-12V) products. The lighting levels of this source are somewhat lower than other light sources. These products are generally used in dark environments such as bedrooms of houses, hotel rooms, kid's rooms, star surface effect, etc. These are manufactured as colour changing and colour constant. They are also manufactured in conformity with IP44 Protection class standard. LED light sources operates problem-free without the need for maintenance for an extended period of time in every environment under 70°C including in- and outdoor venues, underwater and underground environments.

LUMINAIRE SPECIFICATIONS

- Aluminium injection body

IK7 (Ø76x170mm)

IK77

CONTROL SYSTEM

The product can directly be DMS-derived by means of the DMS recorder placed within the product. The product can be dimmed or the colour changing program, inserted to the product, can be ran or other driving options can also be applied or the product can passively be controlled.

FiberOptic Products

Light Source 7 & 77

Light Source 16 IK16

Halogen Light Source

APPLICATION AREA

The halogen light source is manufactured at 50W, 75W and 100W with Lighting Halogen bulbs. They have a bulb lifespan of 3000 - 4000 hours. The light sources generate noise at the level of 30dB at utmost, due to their cooling process with a Fan. They operate with 220V AC mains voltage. The light sources feature colour changeability and/or moiré lighting specifications. The halogen light sources generate a fair amount of infrared rays due to the bulbs and these rays lead to heat generation. In order to eliminate the detrimental effects of this heat, dichroic IR (heat) filters are placed in front of the bulb.

ELECTROMECHANICAL SPECIFICATIONS

- Aluminium body

PRODUCT OPTIONS

Product Code	Lamp Type	POWER CONSUMPTION	Lifetime	Voltage	Noise Factor	Colour Engine	Controller	Colour Disc
IK16	Halogen	50W	3.000 s	220V AC	< 54db	Stepper	DMX	Dichroich metal moire stained-glass
		75W	1.000 s					
		100W	50 s					

MOUNTING OPTIONS

Luminaire dimension 282mm x 136mm x 107mm

Protection Class: IP44
Lifetime: 50.000 hours

FiberOptic Products

Light Source L150 IKL150

General purpose Fiber Optic light source

APPLICATION AREA

Light can be produced at 50W power in 4 different alternatives. Features protection against overheating. Operates with 220 V AC mains voltage. Features colour changing at light sources and / or moire lighting. Apart from fibre optic applications for decorative purposes, UV and infrared, as they do not generate harmful lights, can conveniently be utilised for the illumination of invaluable museum properties, paintings and for medical illumination.

ELECTROMECHANICAL SPECIFICATIONS

- DKP sheet body

PRODUCT OPTIONS

Product Code	Properties	Control System	Lifetime	LED Type	LED Quantity	Light Colour	POWER CONSUMPTION	Working Voltage
IKL 150D	light intensity can be dimmable	Analog 1-10V DC	50,000 hours	Multi-Chip	1	CW, NW WW	min. 18W max. 55W	220V AC
IKL 150H	Wavy effect	-	50,000 hours	Multi-Chip	1	CW, NW WW	55W	220V AC
IKL 150 RGB	All colour tones can be attained with RGB	3 channel PWM	50,000 hours	P5 - II	14	RGB	55W	220V AC
IKL 150 DMX	All colour tones can be attained with RGB	3 channel DMX 512A	50,000 hours	P5 - II	14	RGB	55W	220V AC

Colour Disk:

Colour changing or light control is performed with colours discs connected to the asynchronous engine.

Colour Engine:

Colour changing is performed synchronous cards or DMX system.

MOUNTING OPTIONS

Protection Class: IP44
Lifetime: 50.000 hours

FIBER OPTIC CABLES FOK

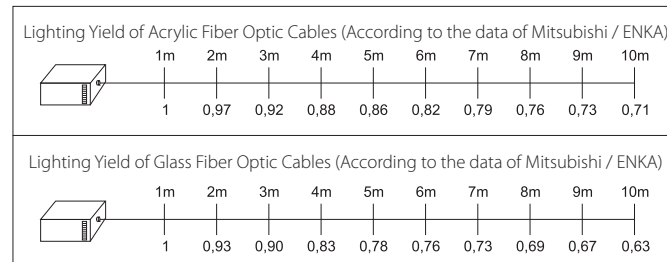

Fiber optic cable options

FIBER OPTIC CABLES

These are the system's basic components and enable the transportation of the light, generated at the light source, to the area of usage. The fiber optic cables are lifetime guaranteed, except the circumstances of application of force and fading or degradation would not occur in the light transported by such cables. Fiber optic cables can be applied anywhere between the temperatures of +110°C and -40°C and are resistant against adverse conditions such as underground, underwater, inner concrete and humid areas. Due to being light transporters, these cables do not cause any risk of electricity. All of the fiber optic cables, utilised for our products, are fiber optic cables manufactured by the Mitsubishi Company. Mitsubishi, which has been manufacturing fiber optic cables since 1975, is one of the best companies throughout the world in this regard. Mitsubishi, aside from our company, exports these cables to many highly qualified companies, located in the States and Europe. Fiber optic cables are manufactured as bared in two main forms which are glass and acrylic. The cutting and shaping, forming harnesses, encasement and finishing of fiber optic cables, depending on needs, which we import in reels, unprocessed, are performed by our company.

ACRYLIC FIBER OPTIC CABLES

PolyMethyl Methacrylate (PMMA) is utilised as a basic substance for the structures of these cables. These are manufactured in diameters between 0.25 mm and 3 mm. The cables can provide long term runtime between the degrees of -40 and +70 °C and short term runtime up to +110°C. These can enable the transportation of the generated light, when affixed to the light outlets of light sources. As these cables can radiate from ends, they can also be ensured to give off light from the side after being harnessed or braided or to transport more quantity of light by being harnessed and encased. The cutting of parts of the cables, which are affixed to the light sources, require quite a specific technology, thus making the on-site manufacturing of fiber optic systems rather difficult. Due to the aforesaid fact, we forge package systems, by merging the ends of fibre optic cables, in a given number and dimensions or prepare cables at the required dimensions and quantities.

Lenses

Lens options for fibre optic cable outlets

APPLICATION AREA

The outlet angle of the light transported with fibre optic cables from the end-point is approximately 60°. This angle is, in general terms, sufficient for many areas of use. However, in the case of need towards a wider or a more acute angle, the requested angles can be provided with lenses. Lenses can also be utilised to hide, relieve, aestheticize the outlet of the light or to direct the light.
